

Famous Holstein Herd Provides High Breed Cattle For Western Development

With the dual object of producing supplies for its own use and to promote high level cattle for Western development, the Canadian Pacific Railway established about eighteen years ago a herd of Holstein cattle at Strathmore, in Alberta. This at its beginning was small, but even more afterwards designated as a great production. Since then only the best bred from sires and dams of pure blood have been selected. In the natural course of events, these sires have been to bring about a wonderful improvement in the parent herd.

Taking as its motto "High production with cheap quality" and in meeting that the Strathmore Farm is a paying proposition, the Animal Husbandry Department of the Canadian Pacific has consistently pursued the policy of breeding a herd of uniformly good quality and distinctive type. Special attention has also been devoted to obtaining high milk and better for production.

Strathmore herd now comprises over one hundred head of high quality pure bred Holsteins, the largest herd of dairy cattle in Canada.

As a record of production, the herd has won 12,000 pounds of milk in 360 days. Strathmore Farm has had record performances in the field, the highest being 34,000 pounds of milk with 86.2 pounds of butter. There are now in the herd 100 head of cows which will equal this, and at least two will get a new standard of production.

Perhaps the greatest stimulus to dairying in Western Canada is given by the "Crest Farm" Cattle Co. as shown here, owners and herdsman, Mr. and Mrs. J. H. McManis, and the Strathmore Farm. The herd has been exhibited at Brandon, Cambridge, and Regina for years. This year a strong representation was not out, particularly as regards young stock. After the "Crest Farm" Cattle Co. herd, the Strathmore Farm, and the "Wheatland" herd.

At these eight shows the Strathmore herd has won one grand prize, two thirds of all show medals, and two thirds of all show medals.

Polar Weather Reservoir

Wilkins Expedition To Antarctic To Study Conditions

Study of the largest of the world's ice fields and the weather reservoirs in the main objective of the Wilkins expedition, now on its way to Antarctica. The crew, as large as Europe, will observe the Antarctic continent, to be followed by meteorologists as the final weather station of the expedition.

The few records in existence indicate it is less than an acre of snow per year. This is the kind of snow, known as "light," a region of high barometric pressure, characteristic of anti-cyclones in the atmosphere, revolving about the center of the snow, and it blows out from the center. A notable phenomenon of Antarctica's meteorology has been the invariable reports that the prevailing pressure "wide about its outer edges blow outward. Numbers of weather experts have concluded that the South Pole may be blanketed with a "high" area as large as Australia.

Feeding Steers Loose Or Tied

Stevens Fed In Loose Pen Market Better Gains

Stevens fed the market in loose pens made better and more economical gains at the Lacombe, Quebec, Experimental Station. During a period of nine years in which the method of feeding has been under test, the cattle running loose gave the best returns in all but two years. Last year the steers fed in stalls made slightly better gains amounting to 1.20 pounds per steer per year for a cost of 7.10 cents per pound of gain. At a cost of 8.00 cents per pound of gain for those running loose in the pens. From his experience with this method, the superintendent of the station, Dr. J. H. McManis, has published by the Department of Agriculture, Ottawa, reports that steers fed in loose pens make gains with more economy taking one year with another.

S.C. Cattle For China

Five Okanagan Jersey heifers have been shipped to Shanghai, China. They were selected from the herd of J. H. McManis, of the Strathmore Farm, and are being shipped to the Chinese government for the purpose of improving the local stock.
